

eHealth Standards Landscape

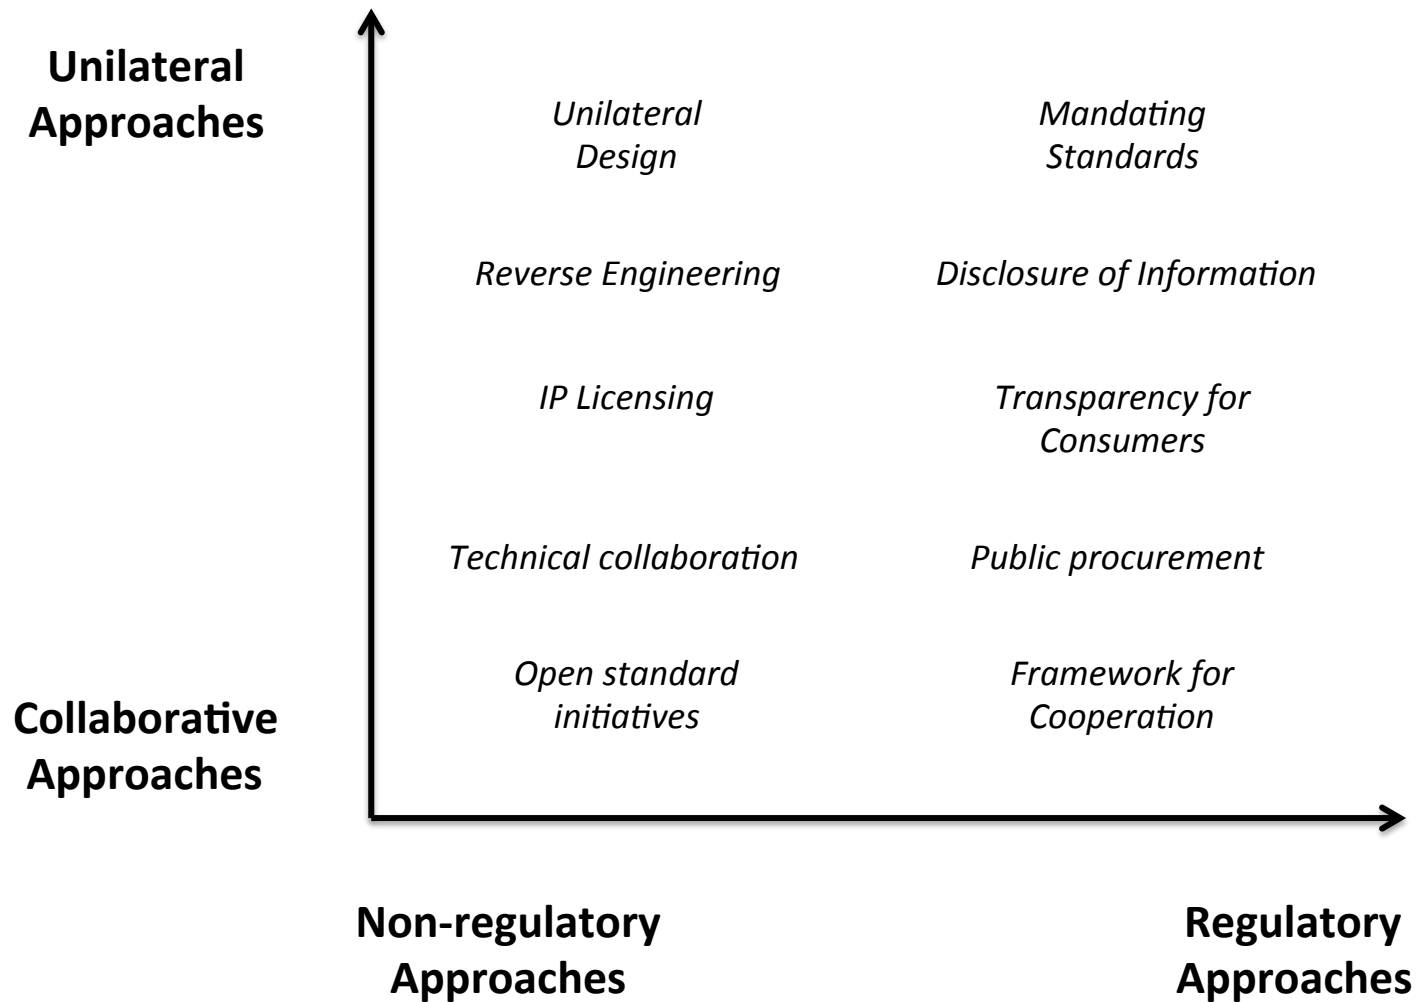

Standards & Interoperability Working Group

Improve alignment on and adoption of information and technology standards that support scale and promote greater interoperability amongst mHealth systems and deployments to ensure alignment, maximum value, and cost effectiveness.

Proposed 2-year targets:

- # countries adopted standards-based, national electronic registries
- # implementing organizations adopted open standards at district level or greater
- # strategic mHealth standards gaps targeted with catalytic funding
- # countries adopted at least 1 open standard into National eHealth Strategy or similar declaration

Interoperability Layers

1. **Technical** – functional components and interfaces
2. **Data** – structured, coded, interpretable information
3. **Human** – common language, understood actions, compatible workflows
4. **Institutional** – interaction of societal systems, such as policy, law, and trade
